QMS® 2425 ImageServer® Notice

Introduction

This sheet provides information regarding a discrepancy in the software initialization of QMS 2425 Print Systems that have ImageServer installed.

Duplexer Option Shows on Startup Page when ImageServer is Installed

Due to a discrepancy in the software initialization process, QMS 2425 Print Systems with ImageServer installed show that a duplexer is installed when you print a start-up page. This may or may not occur everytime you print a start-up page, and it does not mean that you have a duplexer installed.

The duplexer is an installed option and will not be resident on your system unless you've installed it. If you can't determine if you have the duplexer option, contact your vendor or QMS representative for further information.
